Experiment No.: 03

1. Title: Implement control structures and form validation; create a grading system based on user-entered marks.

2. Software/Tools Required: HTML, VS Code.

3. Theory: This experiment demonstrates the use of control structures (if-else statements) and form validation in JavaScript. The user enters marks through an HTML form, and the program checks whether the input is valid (between 0 and 100). Based on the entered marks, the program determines the student's grade using conditional statements and displays the result dynamically on the webpage. This experiment helps in understanding decision-making, input validation, and user interaction in web development.

Priya's Student Grading System (24070521179):

Enter Marks:

Marks = 90
Grade = A

5. Case Study Title:

Task 1: Scholarship Eligibility

Case Study:

A college awards scholarships based on marks.

Below 50 - Not Eligible

50–69 - Bronze

70–84 - Silver

85–94 - Gold

95–100 - Platinum

Task:

Write a JavaScript program that accepts student marks and displays the scholarship category.

6. Case Study Program Code:

7. Output:

The screenshot shows a web form titled "Scholarship Eligibility". It has a text input field labeled "Enter Student Marks:" with the value "78" entered. Below the input field is a green button labeled "Check". Below the button, the text "Scholarship Category: Silver Scholarship" is displayed in blue.

8.Result/Conclusion: The grading system successfully accepted the user's marks, validated the input, and displayed the correct grade according to the predefined grading criteria. This experiment helped in understanding how form validation ensures valid user input and how control structures (if-else statements) are used to make decisions and generate appropriate output in a web application.
